

Opening doors to data

Panel: Labour and employment

Gaëlle Simard-Duplain
Carleton University

October 28, 2025

- ▶ Research focus:
 - ▶ Determination of **labour market and health outcomes**.
 - ▶ **Interaction of policy and family** in determining inequalities.
 - ▶ Intrahousehold family dynamics,
 - ▶ Intergenerational transmission mechanisms.
- ▶ Research interests colour perspective on labour market data.
 - ▶ **Administrative data**.
 - ▶ E.g., tax records (LAD, IID), employer-employee linked data.
 - ▶ **Intersection of labour and health**.

Opportunities for improvement

1. Data linkage processes.

- ▶ Tremendous progress in past years!
 - ▶ Prevalent, to boost potential of existing data sources.
 - ▶ Example of stakeholder collaboration.
- ▶ Important limitations in current model:
 - ▶ Process is slow and costly (money and time).
 - ▶ Administrative data still treated as a purely secondary data.
 - ▶ Limited info on available data sets and linkage possibilities.

2. Communication infrastructure between stakeholders.

- ▶ Data providers hold much of the expertise about data.
- ▶ Researchers also gain unique expertise from hands-on experience.
- ▶ Policy makers and govt analysts can interface.

3. “Labour” data sets and health data sets.

- ▶ Labour-related data $\approx$ federal; health data $\approx$ provincial.

1. Flexible data linkage environment.

- ▶ To encourage researcher-led linkages,
 - ▶ Supported by data provider expertise, and
 - ▶ Motivated by policy needs.
- ▶ In practice:
 - ▶ Single data linkage environment.
 - ▶ Unique longitudinal personal identifiers.
- ▶ Example: British Columbia's Data Innovation Program.

2. Structured stakeholder collaborations.

- ▶ Example: CRDCN/government calls for proposals.

Thank you!
